

Appel à projets de recherche 2025

Projet

Titre du projet, acronyme	
Cinq mots-clés	
Catégorie	<input type="checkbox"/> standard <input type="checkbox"/> exploratoire
Budget total demandé et durée	x k€ / y ans

Porteuse/porteur

Porteur.se : NOM Prénom, mail	
Corps, fonction, statut (permanent/contractuel)	
Employeur	

Structure de recherche

Unité du/de la Porteur.se (acronyme et tutelles)	
Directeur.trice de l'Unité : NOM Prénom, mail	
Gestionnaire administratif.ve : NOM Prénom, mail	

Unité ou structure de rattachement	Partenaire	Expertise ou technique
Unité A : acronyme, tutelles, localisation	Partenaire 1 : prénom, nom, position, employeur	
	Partenaire 2	
Unité B	Partenaire 3	
A joindre CV Porteur.se et partenaires		

Fonds demandés (en k€) - sans frais de gestion				
TOTAL	Salaire (€ HT)	Fonctionnement (€ HT)	Équipement (€ HT)	
Année 1				
Année 2				
Année 3				

The core project description is limited to 5 pages (arial 11), including the 6 following sections:

Summary (300 words max)		<i>Indicative section sizes</i>
1- Alignment with the Specific Objectives of the Call for Proposals:	Projects will be evaluated based on their relevance to the central theme and goals of the call.	1/2
2- Multidisciplinarity of the collaboration (for standard and exploratory projects).	The evaluation will consider the degree of multidisciplinary interaction, with an emphasis on fostering partnerships between different axes of the BioHealth cluster disciplines, or proposals that demonstrate active collaboration among researchers and a clear integration of diverse expertise will be prioritized. Only teams affiliated with the Biology-Health Hub are eligible for funding, but collaboration can include external teams.	1/2
3- State of the Art:	Describe the current and most advanced level of development in the field, incorporating the latest research, methodologies, technologies, and practices	1
4- Project Objective:	Describe the specific goal or aim that the project seeks to achieve. It outlines the desired outcome and the purpose of the project, guiding the direction and scope of the work. The objective should be clear, measurable, and aligned with the theme of the call.	1/2
5- Originality / Novelty	Originality / Novelty: Refers to the innovative aspects of the project, emphasizing the introduction of new	1/2

	<p>ideas, methodologies, or approaches that have not been explored before or that significantly improve upon existing solutions. This criterion evaluates how the project offers a fresh perspective or contributes something unique to the field. Ambition: Unlike more traditional calls for proposals, the PTL aims to support particularly challenging projects. An ambitious project aims to achieve significant outcomes, addresses complex problems, and seeks to make a notable contribution to advancing knowledge or technology in its area of focus.</p>	
<p>6- Research Program Description:</p>	<p>This section outlines the specific objectives, methodology, feasibility and expected outcomes of the research project. It should detail the research questions being addressed, the approaches and techniques that will be used, and the overall significance of the project in advancing knowledge or technology within its field. A clear timeline (Gantt chart) and structure of the project should also be included to demonstrate how the research will be executed.</p> <p>The feasibility section evaluates whether the project can realistically be completed within the proposed time frame, budget, and available resources. This is particularly important for emerging projects with limited preliminary results to support feasibility. It should address potential challenges or risks and propose alternative strategies or 'fall-back' solutions in case unforeseen obstacles arise. These solutions serve as contingency plans to ensure the project remains on track, even if certain aspects do not go as initially planned.</p>	<p>2</p>
